

WHY TO BE FRIENDLY WITH THE ENVIRONMENT WHILE DIVING?

Personal reason: we are all responsible to the extent of our possibilities for the conservation of natural heritage, a legacy that we have the obligation to preserve for future generations.

Sporting reason: divers are the group that lives their relationship with the sea most intensely, and is therefore the most interested in maintaining its natural conditions, the richness of the depths it visits and the quality of the water in which it submerges.

Image motive: it should be a common objective for all practitioners of underwater activities to offer the rest of society the true image of our sport, highly respectful of the environment in which it takes place.

SOME GOOD MANNERS

- Protect the see bottom, where you immerse yourself.
- Refine your technical-diving. Master control of your buoyancy control and finning.
- Respect the wildlife. Behave just the photos, because the next diver can also enjoy the dive.
- Take all the time example of correct behavior.
- Be critical of the actions harmful or unsportsmanlike.
- Learn about the most important plant and animal species from the area where you dive and the overall functioning of the ecosystem in which they live.
- Remember that the whole planet is a single ecosystem. What you do on land affects the sea.
- Be aware of your role and act accordingly!
